Oracle Fusion Cloud ERP

For decades, organizations have been using Enterprise Resource Planning to manage their business functions within a centralized, integrated system that provide a flexible platform to run connected and optimized back-end processes.

With Oracle Fusion Cloud ERP, our clients have been gaining resilience and agility, while positioning themselves in the frontiers of their industries. As always, Oracle Fusion Cloud ERP help organizations adapt to new business models and processes, minimize expenditure, enhance business insight and encourage innovation.

Through years of extensive experience, Bayanat specialize in Oracle Fusion Cloud ERP implementations, enhancements, extensions, and technical services for applications like Oracle Financials, Procurement, Supply Chain and Asset Management.

Bayanat specialized Oracle Fusion Cloud ERP services have enabled clients across all industries to improve productivity, optimize resources, increase profitability and enhance collaboration while gaining higher levels of compliance and business insight.

Our teams of experts and business consultants are the best in the region in understanding the business needs, operational models and technical challenges for every customer, and accordingly, they design and implement the best solutions to meet the client requirements and achieve profitability and compliance based on Oracle recommended practices and industry standards.

Implementation

With focus on the Banking Sector, Bayanat provide an efficient and integrated approach for implementation and deployment services that are based on Oracle® Unified Method (OUM) to address the required functionalities following Banking Sector Best-Practices for automated workflows and end-to-end business cycles.

Bayanat Implementation Services

- Fast, Reliable on-premise, Fusion Cloud (SaaS) or Hybrid implementations
- Data Modeling, Sourcing, Synchronization, Conversion & Migration
- Integration with other systems: Core Banking and others

Be Responsive!
Make Better Financial Decisions

Assessment

Bayanat pre-developed assessment techniques allow consultants to quickly and efficiently analyze business processes and technologies to offer immediate diagnoses and identify the nature and cause of unique and pressing business ailments. We dig deep to find the root cause and provide the smartest solutions to eliminate problems.

Bayanat Assessment Services

- **Current Business Cycles Review** – a thorough review for the current business cycles over the implemented modules.
- **Implemented Applications Assessment** - perform an overall assessment for the implemented Fusion Cloud ERP components on a Test Environment.
- **Course of Action and Best Practice Recommendations** - The consulting effort is concluded by providing a recommended course of action for the implemented solution optimization.

Extension

Bayanat perform Extension Services for existing Oracle Fusion Cloud ERP implementations to automate and optimize current processes, and maximize solution performance.

Bayanat Extension Services

- Integration with 3rd Party Applications within the Organization
- Implement Un-utilized Functionalities within the Fusion Cloud ERP Components (Budget Controls…)
- Implement New Modules to Enhance and Raise the Applications Utilizations

Be Agile!
Plan for Success Beyond your Next Move.

Enhancement

Bayanat orchestrate a team of Oracle ERP consultants that are capable of providing the latest and most reliable experience on the Technical and Functional levels. With solid knowledge of the Banking Sector best practices and latest updates of the systems, they can provide recommendations to achieve the most optimized ERP solutions.

Bayanat Enhancement Services

• Document and implement workflows.

• Perform Functional Business Enhancements:
  • Increase overall system utilization by activating unutilized modules and functionalities.
  • Business Process Reengineering - Revisit, enhance, and unify business processes and flows.

• Perform Technical Enhancements:
  • Revisit and enhance the existing custom reports.
  • Build interfaces with 3rd party applications.

Be Compliant!
Streamline and Integrate Procurement

Managed Services

Bayanat offer Managed Services to run back and front-end operations over Oracle CX according to the client's policies and set processes. Those could include:

• End of Year (EoY) Closures on Oracle Financials
• End of Month (EoM) Closures on Oracle Financials
• Database and middleware components management
• Building integration layer to Enable Digital Transformation
• Shift & Lift: Managing IT Infrastructure and Moving to the Cloud

Training

For years, Bayanat professional, certified consultants helped businesses achieve their capacity building and technology acceleration goals through:

• Oracle Certified Training
• Hands-on technical and functional workshops
• Step-by-Step guidance that is aimed at building user readiness and extreme knowledge transfer

Support

Bayanat support team will help proactively maintain the health of your business and manage the operations of your Oracle investments by monitoring implementations, performing health check and root-cause analysis, predicting possible problem areas, and offering preventative solutions to avoid ailments.

Bayanat Support Services

• **Oracle infrastructure technical support:**

  • Configuration management
  • Performance tuning
